

5A05 Aluminum Sheet

5A05 Aluminum Sheet with Excellent Corrosion Resistance

The 5A05 aluminum sheet is an Al-Mg series rust-proof aluminum alloy (the magnesium content of 5B05 is slightly higher than 5A05). The alloy has a higher magnesium content and a lower strength, which is similar to that of the 5A03 alloy. Anneal temper has high plasticity and moderate plasticity in semi-cold work hardening. 5A05 aluminum sheet with hydrogen atom welding, spot welding, gas welding, and argon arc welding has good welding performance, high corrosion resistance, low machinability during annealing, good machinability during semi-hardening, and anodizing when manufacturing rivets.

With two decades of aluminum sheet production experience, Mingtai Al. can produce and supply high-quality 5A05 aluminum sheets of different sizes and tempers.
