

# Aluminum plate for roller shutters

Aluminum plate for roller shutters of Henan Mingtai Aluminum Co., Ltd.

## Aluminum alloy roller shutters

Roller shutters are a kind of soft decoration for new homes. They are basically used in newly built buildings and decorations. "Aluminum alloy roller shutters" are a widely used type of curtains, made into the shape of blinds. Aluminum alloy roller shutters are mainly composed of aluminum alloy that is not easy to rust. Aluminum plate for roller shutters, such as 3004 aluminum plate, 3104 aluminum plate, 3005 Aluminum plates, 3105 aluminum plates, etc., have the advantages of being lightweight and durable.

## Requirements for raw materials for aluminum alloy roller shutters

The raw material of aluminum alloy roller shutters is usually 3000 series aluminum-manganese alloy. This series of aluminum alloy has appropriate elongation, good corrosion resistance, good processing performance, and can be smelted and processed into alloys of different hardness according to different application requirements.

Aluminum plates for roller shutters value the excellent corrosion resistance and processability of aluminum plates. In addition, it has beautiful appearance, simple and neat appearance, is not easy to corrode, and the materials are recyclable, so it is deeply loved by the majority of users.

## Performance advantages of aluminum alloy roller shutters

1. Light weight and high strength. Aluminum shutters are usually hollow and thin, lightweight and easy to use, and the bending strength of the

cross-section is not easy to deform.

2. Good sealing performance. Aluminum blinds are made of waterproof, elastic and durable sealing materials, so the sealing performance is particularly good.

3. Strong corrosion resistance. There is an oxide layer on the surface of aluminum alloy shutters, which has certain corrosion resistance. The surface is not easy to fall off or fade, and basically requires no maintenance.

## Aluminum plate manufacturer Mingtai Aluminum

There are many aluminum plate manufacturers on the market. Which roller shutters use aluminum plates more reliably? Let me introduce to you Henan Mingtai Aluminum Industry

1. Mingtai has a modern large-scale factory building of 1.3 million square meters, with factories in many places in Henan Province and offices in many regions across the country.

2. It has a "1+1" hot rolling production line, a "1+4" hot rolling production line, more than 20 independently developed production lines and more than 60 large-scale processing equipment to protect high-quality products.

3. Aluminum plates can be customized, with a thickness of 0.2-500mm, a width of 100-2650mm, and a length of 500-16000. We can accept orders of 8-5000 tons and deliver them in 7-35 days to meet the production needs of our customers.

4. Mingtai Aluminum adopts a direct supply model. All aluminum plates are priced at the factory, without intermediate price increases, saving costs for customers.

## Product Specifications Parameters

Typical Alloy	Material Temper	Thickness (mm)	Width (mm)	Length (mm)	Typical Products
3004 aluminum	Customized production	0.2-500	100-2650	500-16000	Lamp holder

plate, 3104 aluminum plate, 3105 aluminum plate					material, roller shutters , heat sink, LCD back sheet material, aluminum base material for color coating
