1350 Aluminum Sheet, Aluminum Sheet Metal Description:

Aluminium alloy 1350 has the Minimum Aluminium Content of 99.5 %. Alloy 1350 is a non-heat treatable and is the alloy of choice for electric s excellent formability and corrosion resistance. Alloy 1350 is used in various applications but its main users are wires, conductive twisted lines, flow streaming, transformer belt materials. This alloy can also be found various wire form and clips where stream is not as imageant as economics.1350 aluminum sheet is a common 1350 aluminum alloy product.

Application of Mingtai Aluminum Production 1350 Aluminum Sheet

- 1.1350 aluminum alloy is also used to make cables for transmitting signals and power. Aluminum alloy cables are generally lightweight, efficient, and have good electrical conductivity.
- 2.Due to its high purity and good electrical conductivity, 1350 aluminum alloy is also used in the windings of power generation equipment, such as transformers, generators and motors.
- 3.In addition to the power industry, 1350 aluminum alloy can also be used in non-conductive electronic fields, such as manufacturing capacitors, radiators, heat sinks, etc.
- 4.Due to the lightweight properties of aluminum alloy, 1350 aluminum alloy can also be used to manufacture lightweight structures, such as aircraft, satellites and missiles in the aerospace field.
- 5.1350 aluminum alloy can also be used in other areas that require high conductivity, light weight and good processing properties.
